### VOLUME 1 | ISSUE 2 | 2024 -25 : MAY 2025

## **ABOUT BYTE BULLETIN**

The Department of Computer Science and Engineering [CSE] was established in 1998. It instills confidence among the students to make themselves experts in the field of computers. It also enables them to occupy a place of prominence in IT industries globally. The students ought to do a project on or off-campus in the final year with an option to choose their platform and thus they are exposed to the real time computer problems which will mould them to conquer the challenging IT world. The department is affiliated to Anna University and accredited by National Board of Accreditation (NBA), AICTE, New Delhi. BYTE BULLETIN is an annual newsletter that highlights the department's activities, along with the achievements of both faculty and students.

## COMPUTER SCIENCE AND ENGINEERING

### **VISION OF THE DEPARTMENT**

To develop engineers with global employability, capability, research focus and social responsibility

### **MISSION OF THE DEPARTMENT**

- To develop internationally competent engineers in dynamic IT field by providing state-of-art academic environment and industry driven curriculum.
- To motivate and guide students to take up higher studies and establish entrepreneurial ventures.
- To enrich the department through committed and technically sound faculty team with research focus in thrust areas.
- To undertake societal problems and provide solutions through technical innovations and projects in association with the industry, society and professional bodies.

### Programme Educational Objectives (PEOs)

**PEO 1:** Domain Expertise - Possess expertise and emerge as key players in IT integrated domains.

**PEO 2:** Computing Skills and Ethics - Employ computing skills to solve societal and environmental issues in an ethical manner.

**PEO 3:** Lifelong Learning and Research - Involve in lifelong learning and research to meet the demands of global technology.

### **Programme Outcomes (POs)**

**PO1.Engineering Knowledge :** Apply the knowledge of mathematics, science, engineering fundamentals and concepts of Computer Science to solve complex engineering problems.

**PO2.Problem Analysis :** Identify, review literature, formulate and analyse complex engineering problems using first principles of mathematics and engineering sciences.

**PO3.Design and Development of Solutions :** Design and develop computing solutions for complex engineering problems with societal and environmental awareness.

**PO4.Complex problem Investigation :** Investigate complex problems by employing research methods to arrive at valid conclusions.

**PO5**.**Modern Tool Usage :** Evaluate and use appropriate tools and techniques in engineering activities .

**PO6.Societal contribution :** Follow professional engineering practice by applying contextual knowledge to assess societal and legal issues. **PO7.Environment and Sustainability :** Understand and provide professional engineering solutions taking into consideration environmental and economic sustainability.

**PO8.Ethics :** Follow ethical principles and norms in engineering practice. **PO9.Individual and Team work :** Function effectively as an individual, team member or leader in diversified environments.

**PO10.Communication :** Communicate effectively through various modes for all engineering activities.

**PO11.Project Management and Finance :** Apply Engineering knowledge and management principles for effective project management in multidisciplinary environments.

**PO12**.Life-long Learning : Engage in independent life-long learning and skill development for professional and social well being.

### **Programme Specific Outcomes (PSOs)**

**PSO1**. **Systems Engineering:** Employ software engineering principles in the design and development of efficient systems.

**PSO2. Knowledge Engineering:** Apply data analytics techniques for solving real world problems.

Abstract:- Skin diseases pose a major global health concern, impacting individuals of all ages and demographics. Traditional diagnostic approaches rely heavily on dermatologists' visual assessments, which can be time-intensive and subjective, potentially causing delays in treatment and an increased risk of misdiagnosis. These challenges are especially pronounced in remote or underserved regions with limited access to specialized healthcare. To overcome these issues, this study introduces an automated skin disease prediction system powered by deep learning, specifically utilizing the VGG16 convolutional neural network. The system incorporates a robust data preprocessing pipeline involving image normalization, resizing, and augmentation to enhance training efficiency. Through transfer learning, a VGG16 on a curated dataset to extract key features for distinguishing different skin conditions. Custom connected layers then distinguish images into specific diagnosis. Designed as seamless integration into web and mobile applications, this system enables real-time diagnostics, assisting healthcare professionals and patients alike in improving accessibility and treatment outcomes.

Article History:	Abstract: The selection of an optimal hospital for healthcare services is a complex decision-
Received: 12-01-2025	making problem due to the involvement of multiple, often conflicting, criteria such as quality
Revised: 15-02-2025	of care, infrastructure, staff expertise, cost, and patient satisfaction. This paper presents an innovative approach for hospital selection using a hybrid decision-making framework
Accepted: 01-03-2025	combining neutrosophic sets, entropy weight, and the Multi-Attribute Decision-Making (MADM) method. Neutrosophic sets are employed to handle the inherent uncertainty and indeterminacy in hospital evaluation criteria, allowing for more flexible and accurate representation of data that may not be fully precise or certain. The entropy weight method is applied to objectively determine the significance of each evaluation criterion, ensuring that the decision process is not biased by subjective judgments. Finally, the MADM technique integrates the weighted criteria into a comprehensive decision model to rank hospitals based on their overall performance. The proposed model is tested with a real-world dataset of hospitals, demonstrating its effectiveness in selecting the most suitable healthcare facility while considering diverse factors. The results highlight the potential of combining neutrosophic sets with advanced decision-making techniques for improving decision accuracy and reliability in complex healthcare decisions.
