“

PRINCIPAL'S MESSAGE

It gives me great pleasure to introduce MCET Chronicles — a new space where the everyday moments of our campus find a voice.

Engineering education is not built in grand gestures alone; it grows in classrooms, labs, conversations, and quiet moments of discovery. This newsletter is our attempt to capture that.

I see this as more than a publication — it is a shared record of who we are and who we are becoming. I look forward to watching it grow, issue after issue, alongside the community it represents.

”

INSTITUTIONAL ACHIEVEMENTS

A Remarkable Recognition

A Culture That Inspires

MCET has been ranked **First** in the **Great Place to Work - Mid-Size Category**, earning this prestigious recognition for the **third consecutive year**.

This remarkable achievement reflects the institution's unwavering commitment to creating an inclusive, collaborative, and people-centric workplace that values trust, innovation, and excellence.

The recognition highlights MCET's sustained efforts in fostering employee well-being, professional development, and a positive organizational culture, reinforcing its position as one of the leading educational institutions committed to excellence in both academics and workplace practices.

INSTITUTIONAL EVENTS

23rd Graduation Day

MCET celebrated its **23rd Graduation Day** on **13th June 2026** at the Nachimuthu Gounder Centenary Centre. The ceremony was graced by Sri. Rajesh Uppal, Director, Suzuki Motorcycle India (P) Ltd., as the Chief Guest, who inspired the graduates with his address on professional excellence and lifelong learning.

Degrees and awards were conferred upon the graduating students in recognition of their academic achievements.

The event marked a significant milestone in the graduates journey and reaffirmed MCET's commitment to nurturing competent, ethical, and industry-ready professionals.

MCET CHRONICLES JUNE 2026

EXTENSION ACTIVITY

Building Skills Empowering Lives

The Department of Electrical and Electronics Engineering, in association with the Department of Extension Services - Sakthi PURA, AVERA, the Institutional Social Responsibility (ISR) Cell, and the Institution's Innovation Council (IIC), organized a two-day hands-on skill development training programme on "Home Appliances Servicing and Maintenance" on 12-13 June 2026.

The initiative reflected the department's commitment to experiential learning, community engagement, and industry-relevant skill development.

Hands-on training in appliance servicing

Enhanced employability and technical competence

Promoting entrepreneurship and community engagement

SPORTS ACHIEVEMENTS

Team Spirit Winning Together

The MCET Staff Cricket Team actively participated in an inter-institutional cricket tournament, showcasing exceptional teamwork, sportsmanship, and competitive spirit.

The event provided a great platform for faculty members to build collaboration, stay fit, and strengthen bonds beyond the classroom.

Our team's enthusiasm and commitment reflect MCET's focus on holistic development, work-life balance, and a vibrant campus culture.

Teamwork & Camaraderie

Fitness & Well-being

Collaboration Beyond Classrooms

Holistic Development

MCET CHRONICLES JUNE 2026

INSTITUTIONAL RECOGNITION

Honoured for Our Partnership

MCET was honoured at **Sakthi Connect'26**, the flagship event of Sakthi Auto, in recognition of its valuable contributions and long-standing association with the Sakthi Group.

The event celebrated excellence, innovation, and collaborative partnerships, bringing together leaders from industry and academia.

This recognition reflects **MCET's** commitment to academic excellence, industry engagement, and meaningful collaborations that create a lasting impact on society and the engineering profession.

INSTITUTIONAL ACHIEVEMENTS

Strengthening Industry Partnerships

MCET has been recognized as a **Patron Member** of The Coimbatore District Small Industries Association (**CODISSIA**) with effect from May 2026. This prestigious membership strengthens our industry engagement and opens doors for valuable collaborations.

It will create opportunities for industry visits, internships, faculty & staff training, research, joint publications, and enhanced career prospects for students.

Together, we move towards stronger academia-industry partnerships and experiential learning.

STUDENT ACHIEVEMENTS

A Young Cyber Security Expert

Vetrivel U, a **Class of 2027** student from the Department of **Cyber Security**, earned a **Bug Bounty Reward** of **EUR 8,000** (approximately **₹8.65 lakh**) from a France-based multinational company for identifying and responsibly reporting critical security vulnerabilities.

This is his second major bug bounty achievement, reflecting his exceptional skills in cybersecurity and ethical hacking.

His success brings pride to MCET!

Identified & reported critical security vulnerabilities

Expertise in cybersecurity & ethical hacking

Second major bug bounty achievement

Proud moment for MCET

EXTENSION ACTIVITY

Coding Today Solving Tomorrow

The Department of information Technology, in association with Sakthi PURA, organized a two-day training programme on **"Problem Solving Using Python Programming"** on **11-12 June 2026** for school students.

The programme introduced fundamentals of Python, problem-solving approaches, and hands-on coding practice, enhancing student's logical thinking and programming skills

ALUMNI MEET

Reconnecting Reliving Rejoicing

The MCET Alumni Association organized an Alumni Meet on 13 June 2026 across all departments for the 2025 graduating batch.

ALUMNI ACHIEVEMENTS

International Recognition

Mr. Shyaam, alumnus of the 2019 B.Tech. Information Technology batch, received the **11th-35 International Photography Award** in recognition of his outstanding creativity and excellence in photography.

We congratulate him on this remarkable achievement and wish him continued success in his artistic journey

ALUMNI ACHIEVEMENTS

Empowering Communities

Ms. V. Thenmozhi, alumna of the 2014-2018 B.E. Electrical and Electronics Engineering batch, has been selected as an Assistant Engineer in the Tamil Nadu Power Distribution Corporation Ltd. (TNPDC). She received her appointment order on 24 June 2026 from our **Honourable Chief Minister of Tamilnadu, Thiru C. Joseph Vijay** and was posted to the Erode Electricity Distribution Circle.

We congratulate her on this well-deserved achievement and wish her continued success in her career.

Recognized for Academic Excellence

Our faculty and students were recognized as NPTEL Discipline Stars and received Certificates of Appreciation for their outstanding performance in the SWAYAM-NPTEL Discipline Star initiative across the Computer Science, Mechanical, and Electrical domains.

FACULTY ACHIEVEMENTS

Researching Today Innovating Tomorrow

Dr. R. Muthubharathi, AP(SS), Department of EEE successfully completed the Ph.D. from the Faculty of Electrical Engineering, Anna University, on 19 June 2026.

Research Title:

Investigation on Deep Reinforcement Learning and Optimization for Adaptive Workload Allocation in IoT-Fog-Cloud Environment

The research contributes to the advancement of intelligent resource management in distributed computing systems.

The institution extends its congratulations and wishes continued success in future research endeavours.

FACULTY ACHIEVEMENTS

Learning Today Leading Tomorrow

Ms. S. Suthaviji, AP(SS), Department of Civil Engineering, successfully completed the NPTEL-SWAYAM Summer Internship 2026, jointly organized by IIT Roorkee and Anna University.

The internship provided advanced academic exposure and practical insights, strengthening professional expertise and promoting continuous learning in engineering education.

Excellence in Advanced Learning

Mr. P. Boopathi Rajan, AP(SS), Department of Computer Science and Engineering, successfully fulfilled all the requirements for the SWAYAM-NPTEL Faculty Domain Certification (Advanced).

This achievement recognizes his advanced competency in the selected domain and reflects his commitment to continuous professional development and excellence in teaching.

**FACULTY DOMAIN
CERTIFICATION (ADVANCED)**

Advanced Competency
Recognized

A Believer in Continuous Growth

Ms. S. R. Indurekaa, AP, Department of Artificial Intelligence and Data Science, was recognized as an NPTEL Believer after successfully completing all the requirements for the SWAYAM-NPTEL Domain Certification in Data Science - Computer Science.

This recognition reflects her consistent commitment to continuous learning and academic excellence.

ABSTRACT

New series of metal (M = Co, Ni, Cu, and Pd) complexes of the type [M(L)(Cl)] containing a linear tridentate ligand L³⁻ (L³⁻ = (E)-2-methoxy-6-((2-methylthio)phenylamino) methylphenol) were synthesized and characterized by several spectroscopic and redox techniques. The formation and purity of metal complexes 1-4 were validated by using Fourier transform infrared spectroscopy (FT-IR), ¹H nuclear Magnetic Resonance (NMR) (1D, 2D), Visible spectroscopy, Scanning Electron Microscopy (SEM), Brunauer-Emmett-Teller (BET) analysis, Powder X-ray Diffraction (XRD) techniques and redox studies. The spectral studies confirmed that the Schiff base ligand coordinated to the metal ion via N, O, and S donor atoms. All the complexes were evaluated for supercapacitor (SC) applications. Among the studied complexes, supported complexes exhibit promising specific capacitance, cycling stability, and charge-discharge characteristics, ascribed to favourable redox behaviour and steric and electronic interactions facilitated by the ligand architecture. The copper (II) complex shows a specific capacitance of about 242 C g⁻¹, and a charge transfer resistance of 0.7 Ω was obtained from impedance spectroscopy. This present work highlights the competitive tendency of synthesized complexes appended with a Schiff base for SC applications.

1. Introduction

Industrialization and rising energy demands urge researchers to find alternatives to fossil fuels to achieve a sustainable, eco-friendly environment worldwide. Renewable energy resources are not the only better option for the above-mentioned issues due to their seasonal and regional limitations [1,2]. Energy storage plays a vital role in overcoming the energy demands through devices such as advanced batteries and supercapacitors (SCs) to support electric mobility and achieve long-term energy security. SCs have attracted substantial attention owing to their ability to deliver high power density, rapid charge-discharge performance, and exceptional cycle life compared with batteries [1,3]. SCs can store energy either by electrical double-layer capacitance (EDLC) or pseudocapacitance. In EDLC-type cells, charges are stored via the adsorption and desorption of electrolyte ions at the electrode surface. On

the other hand, pseudocapacitance stores the charges by the surface faradaic reaction at the interface of the electrode and electrolyte [1,3]. Although traditional EDLC materials, like activated carbons, have a large surface area, they are limited by their low specific capacitance [1]. The electrodes are a crucial part of energy storage devices and perform a key role. Subsequently, researchers are keen on developing pseudocapacitive materials that consist of transition metal-based materials (oxides, hydroxides, nitrides, and coordination compounds) because of their multiple redox centers, resulting in high specific capacitance [1,3]. In the SCs architecture, electrodes are more crucial than any other component [1,3]. Carbonaceous, conducting polymeric polymers, and metal oxides are the three main electrode materials that are frequently utilized to create SCs [1,3]. Low packing density in porous carbonaceous electrodes severely limits their capacitance [1,3,13]. Additionally, owing to their greater surface areas and redox storage capacity, conducting

ABSTRACT

Accurate diagnosis of osteoarthritis (OA) and effective planning for total knee replacement (TKR) remains challenging due to complex anatomical variations and the high dimensionality of 3D MRI data. This study proposes a multi-scale attention and transformer-based deep learning framework for automated OA severity classification and TKR decision support. The framework incorporates adaptive morphological wavelet filtering for noise reduction and a prompt-tuned transformer for hierarchical feature extraction. A multi-scale convolutional attention network is employed to capture fine-grained degenerative patterns, while a metaheuristic optimization strategy enhances model efficiency and parameter tuning. The proposed approach was evaluated on clinical MRI data from Landspítali University Hospital and the Osteoarthritis Initiative (OA) dataset. Experimental results demonstrate superior performance, achieving classification accuracies of 98.60% and 98.42%, respectively, outperforming existing state-of-the-art methods. These findings indicate that integrating transformer-based learning with multi-scale attention mechanisms significantly improves diagnostic accuracy and robustness. The proposed framework offers a reliable and scalable solution for automated OA diagnosis and TKR planning, supporting clinical decision-making in orthopedic care.

1. Introduction

Knee osteoarthritis (OA) is one of the most common degenerative joint conditions and a leading cause of disability worldwide. It affects approximately 13% of women above the age of 60 and 10% of men, with profound clinical, social, and economic implications [1,2]. In advanced cases, total knee replacement (TKR) remains the gold standard for treatment. However, delaying disease progression through accurate early diagnosis and timely intervention is essential for improving patient outcomes. Conservative strategies such as weight management, physiotherapy, and lifestyle modification are most effective in the early stages of OA [3-6]. The ability to identify high-risk patients at an early phase can also accelerate the development and validation of disease-modifying therapies, thereby strengthening clinical trial design and therapeutic decision-making [7,8]. Conventional diagnostic techniques, such as radiographic evaluation, have limited sensitivity for detecting early degenerative changes, particularly in cartilage. Magnetic resonance imaging
